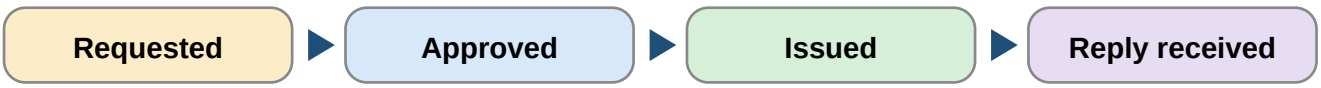
What changes on Monday

Outgoing referral letters at Klinik Pratama Medika Utama (main clinic). For counter staff.

TODAY (paper)	FROM MONDAY (app)
REQUEST The doctor fills in a paper form. The patient carries it to the counter and waits, about 40 minutes.	**The doctor enters the request in the app. It shows in your queue at once. No paper form.**
LOG You write every referral in the log book. About 1 in 5 gets missed.	**Every referral is logged by the app automatically. Nothing to copy by hand.**
PRINT You type the letter, print it, and walk it to the doctor.	**You can see a DRAFT preview. The official letter prints after the doctor approves it in the app.**
NUMBER AND VALIDITY The letter number and the 90-day validity are written by hand.	**The app gives the letter number and the valid-until date (90 days after issue).**
HOSPITAL CALLS You search the record folder and the log book. It takes a long time.	**Type the letter number, RM number or patient name in the search box. The referral and the letter copy appear.**

Every referral has a status you can see (Reply received starts in round 2):



COMING LATER (not on Monday)

Round 2: the branch clinic starts using the app, and you can record a reply letter when a patient brings it back (for example Pak Udin's letter from the surgeon). Round 3: an Expired marker after 90 days, and summary numbers for Pak Joko, for each site and in total.

To be confirmed by Pak Joko and the head of the records unit: the print order in the SPO RM-51 (print after the doctor signs, or before). Until then, use this poster as a draft. Patient names are fictional.
